

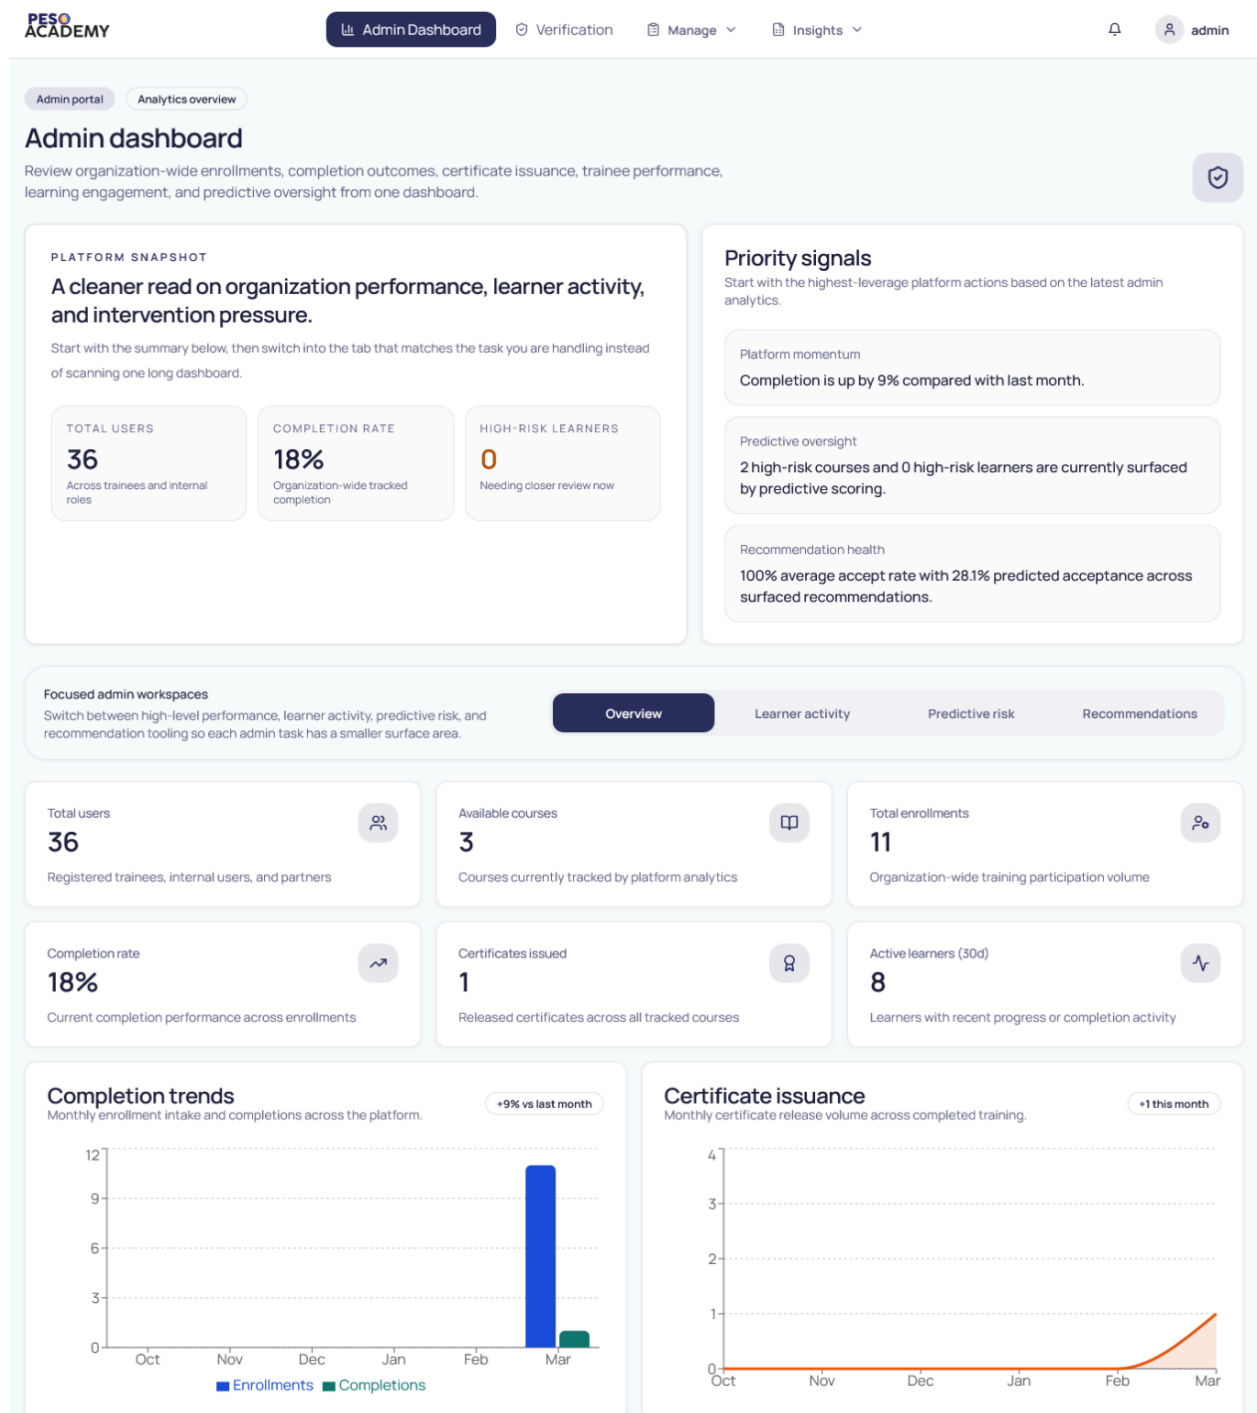

Figure 1: Admin Dashboard

Figure 1: Admin Dashboard functionality: The Admin Dashboard gives administrators a consolidated view of key platform metrics, recent activity, and operational shortcuts so they can quickly monitor usage, identify pending work, and navigate to the areas that need attention.

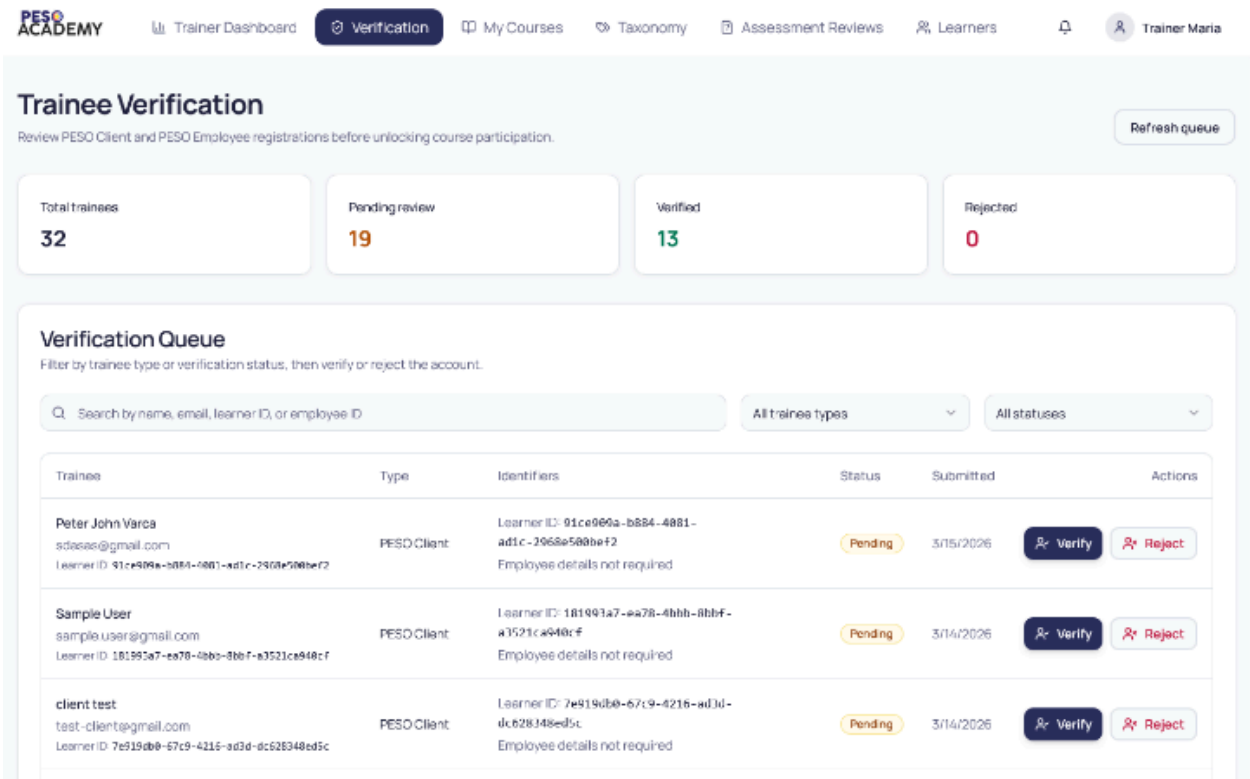

Figure 2: Admin - Account Verification

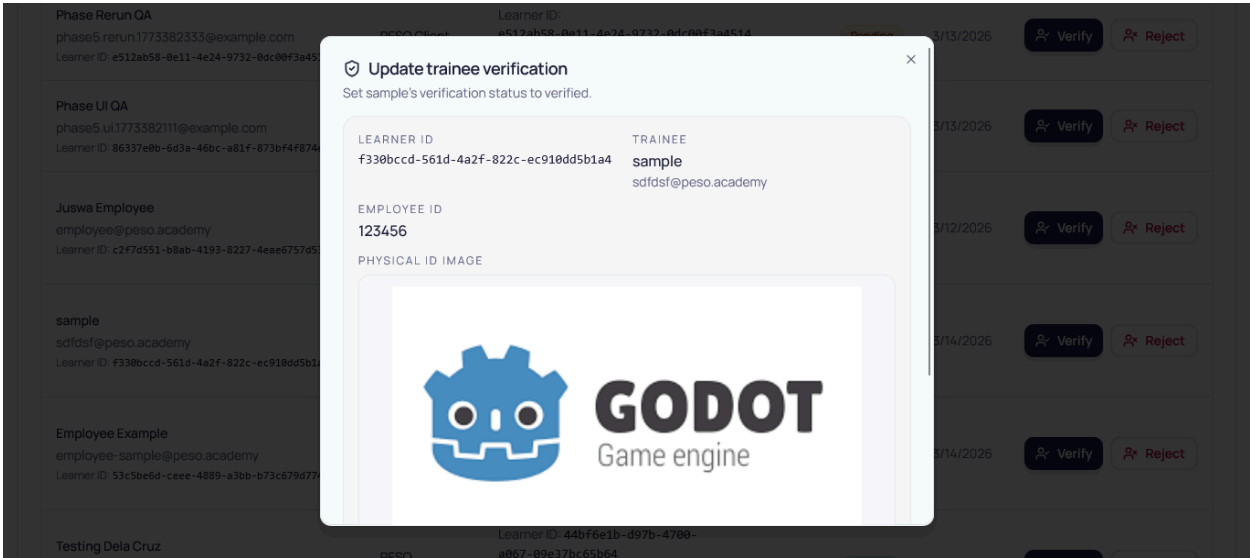

Figure 2.1: Admin - Verifying an account

Figure 2: Admin - Account Verification functionality: The account verification screen lists users awaiting review and lets administrators validate submitted registration details before granting access, which helps keep platform membership accurate, secure, and aligned with approved roles.

Figure 2.1: Admin - Verifying an account functionality: This verification flow lets an administrator inspect an individual account request, confirm the user information and supporting details, and then approve or reject the request so the account moves to the correct access state.

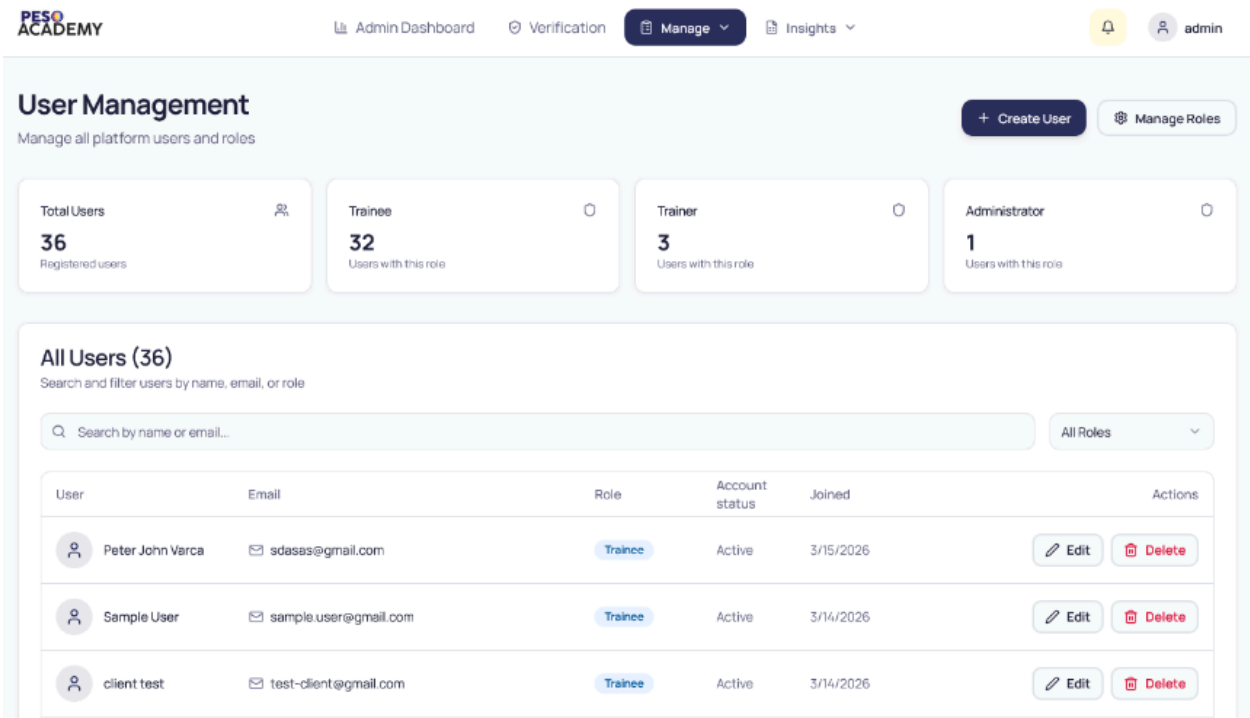

Figure 3: Admin - User Management

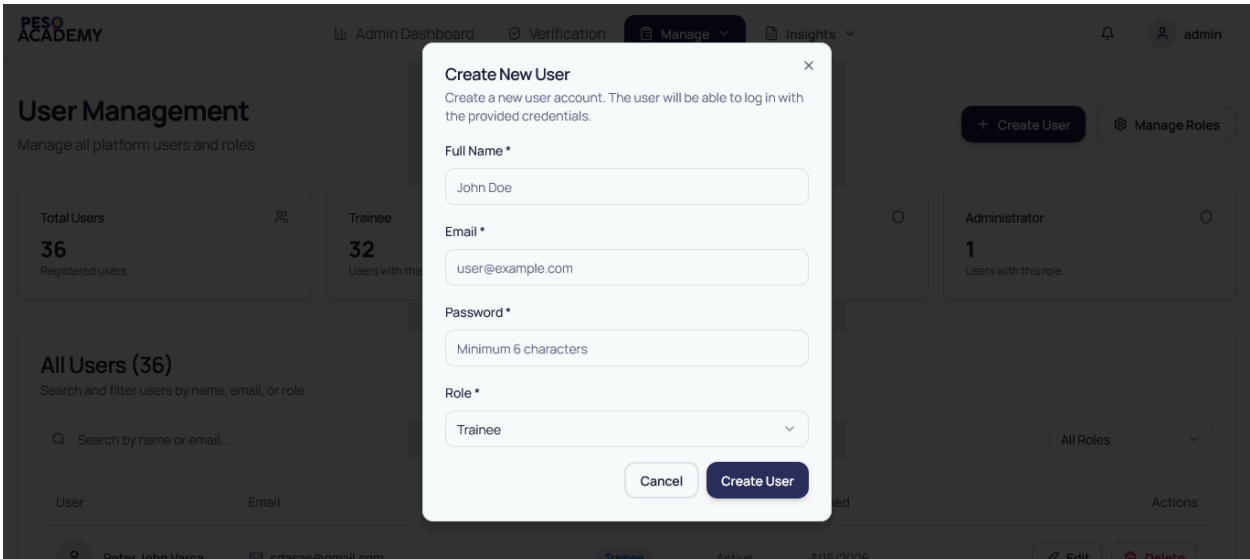

Figure 3.1: Admin - Creating a user

Figure 3: Admin - User Management functionality: The user management page allows administrators to browse, search, filter, and maintain user records so they can monitor account status, review assigned roles, and open specific actions for each user from one control surface.

Figure 3.1: Admin - Creating a user functionality: The user creation form enables administrators to add new platform accounts by entering core profile information, assigning the appropriate role, and preparing the account for activation without waiting for self-registration.

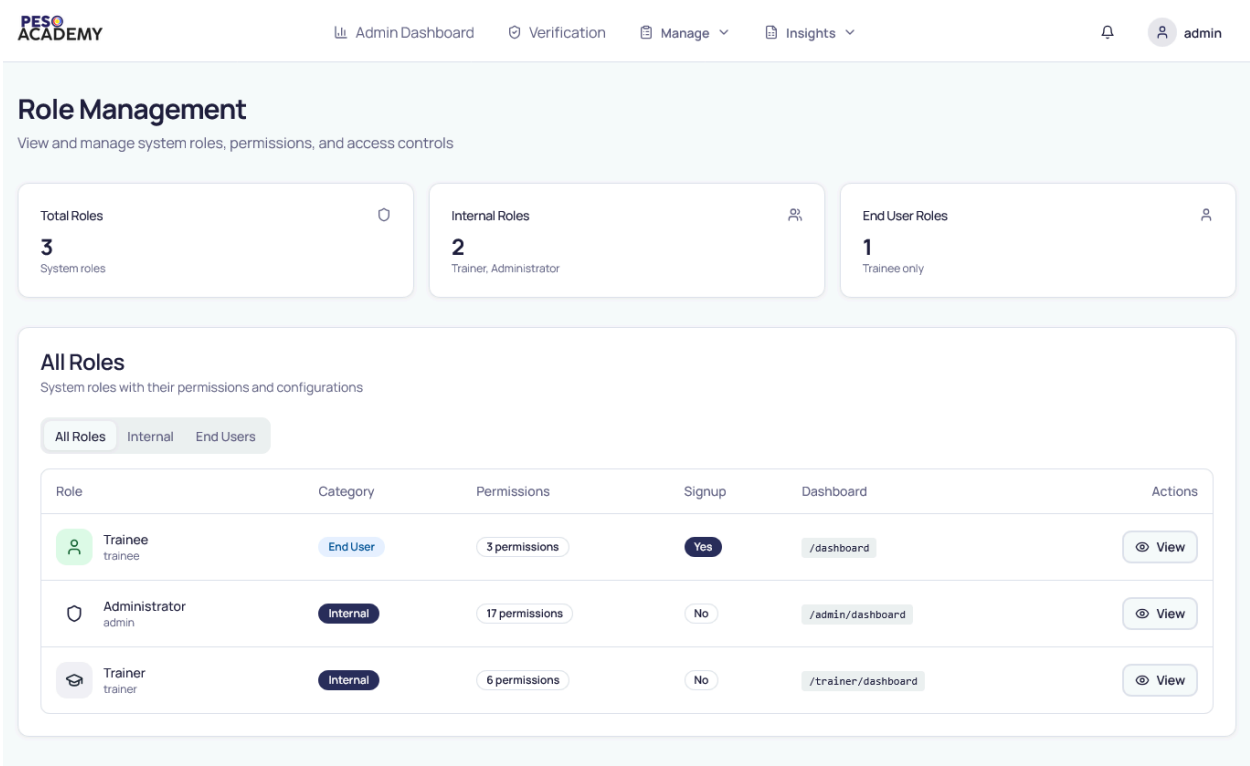

Figure 3.2: Admin - Role Management

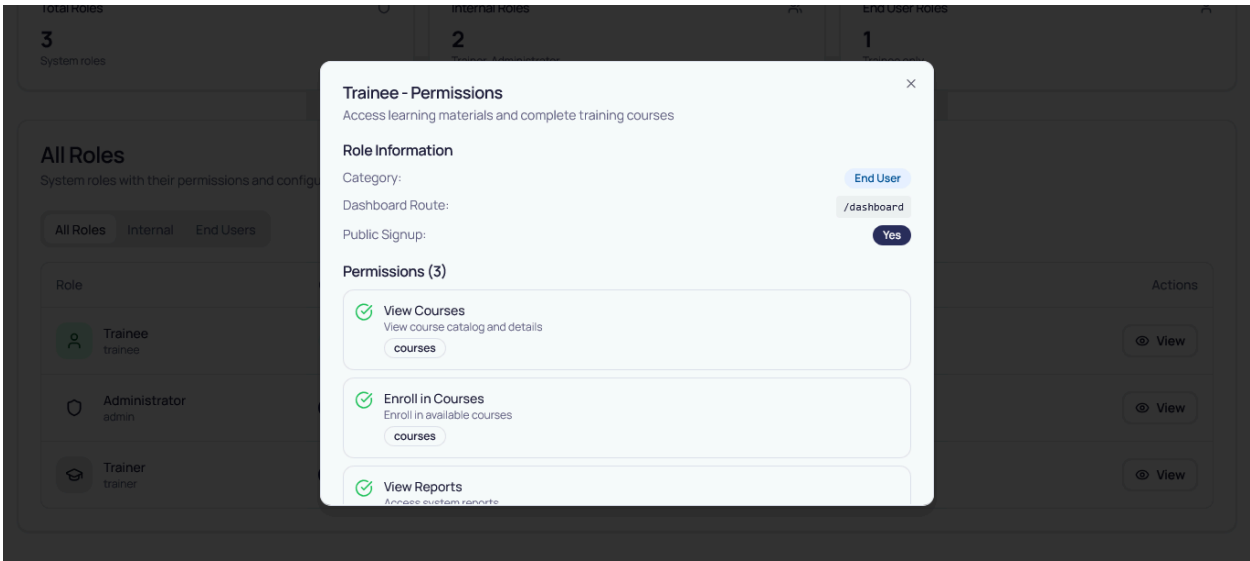

Figure 3.3: Admin - Viewing Role Permission

Figure 3.2: Admin - Role Management functionality: The role management view is used to define and maintain system roles so administrators can control which permission sets are available and keep access responsibilities consistent across the platform.

Figure 3.3: Admin - Viewing Role Permission functionality: This permission view shows the access capabilities attached to a selected role, giving administrators a clear reference for what that role can do before they assign it to users or adjust related governance rules.

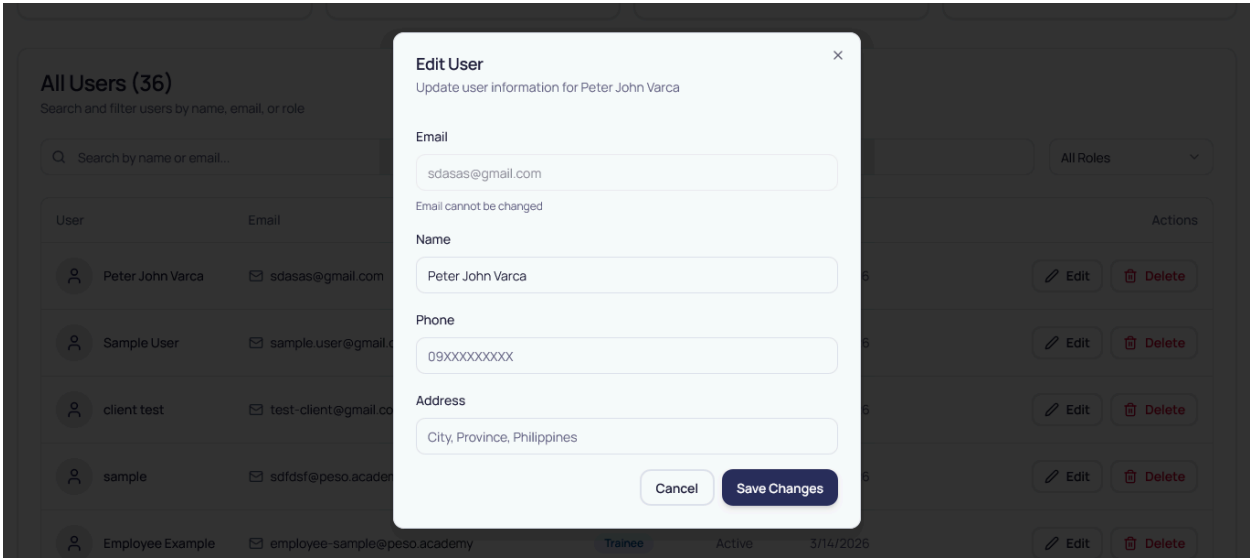

Figure 3.4: Admin - Editing a User Basic Information

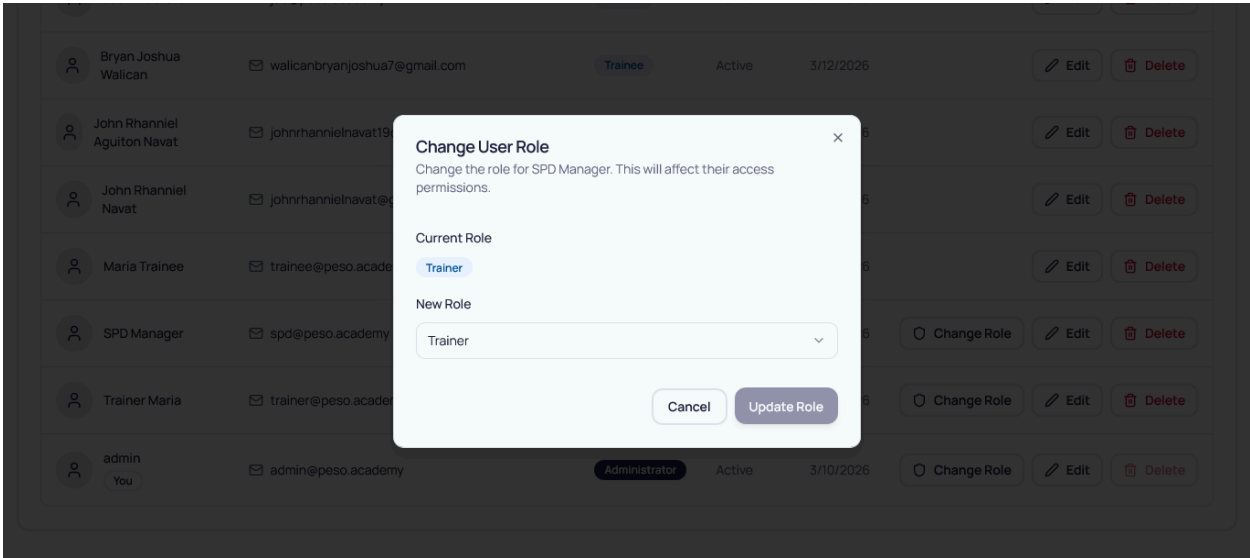

Figure 3.5: Admin - Changing a User Role

Figure 3.4: Admin - Editing a User Basic Information functionality: The basic information editor lets administrators update an existing user's profile details, such as identifying and contact information, without recreating the account or affecting unrelated learning records.

Figure 3.5: Admin - Changing a User Role functionality: The role change action allows administrators to reassign a user's access level when responsibilities change, ensuring the user immediately receives the correct permissions and system visibility for the new role.

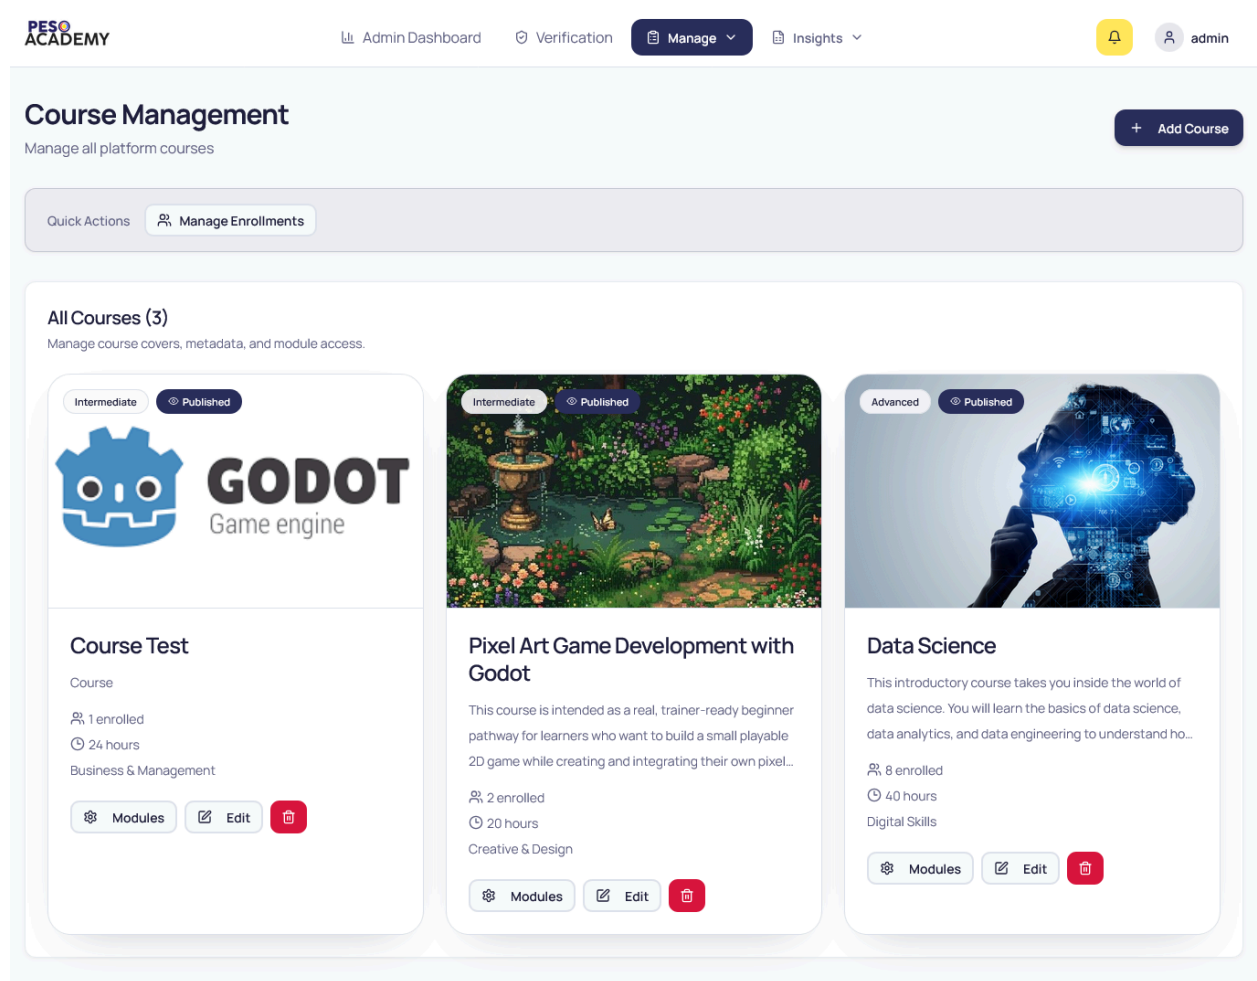

Figure 4: Admin & Trainer - Course Management

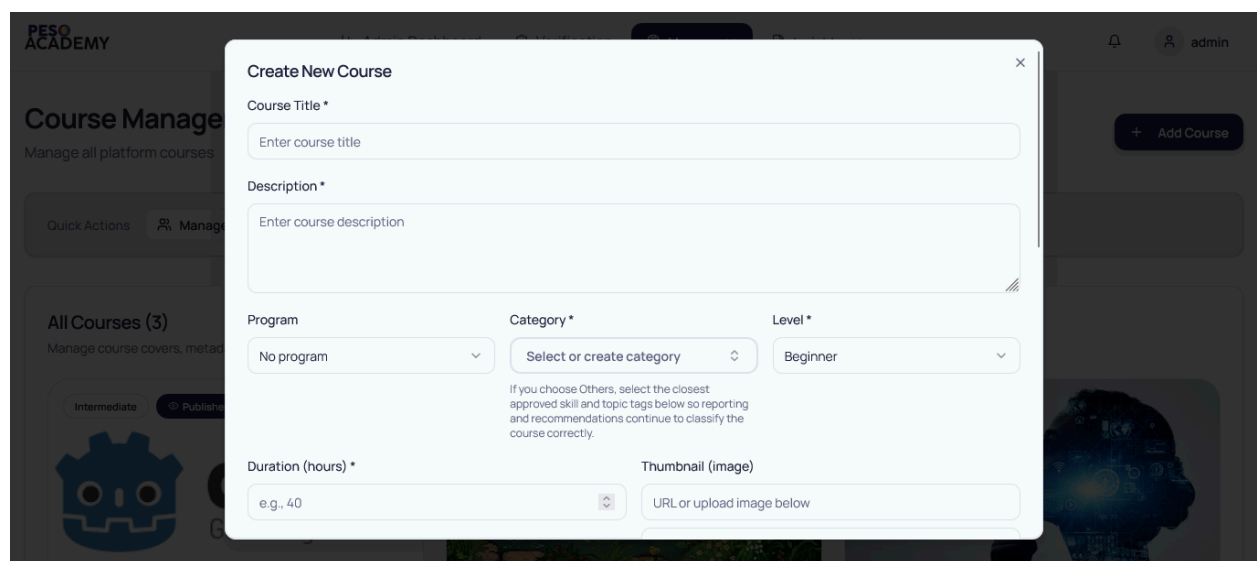

Figure 4: Admin & Trainer - Course Management functionality: The course management area is used by administrators and trainers to maintain the course catalog, update metadata, control publication state, and manage the high-level structure that connects courses to modules and assessments.

Figure 4.1: Admin & Trainer - Course Creation Modal

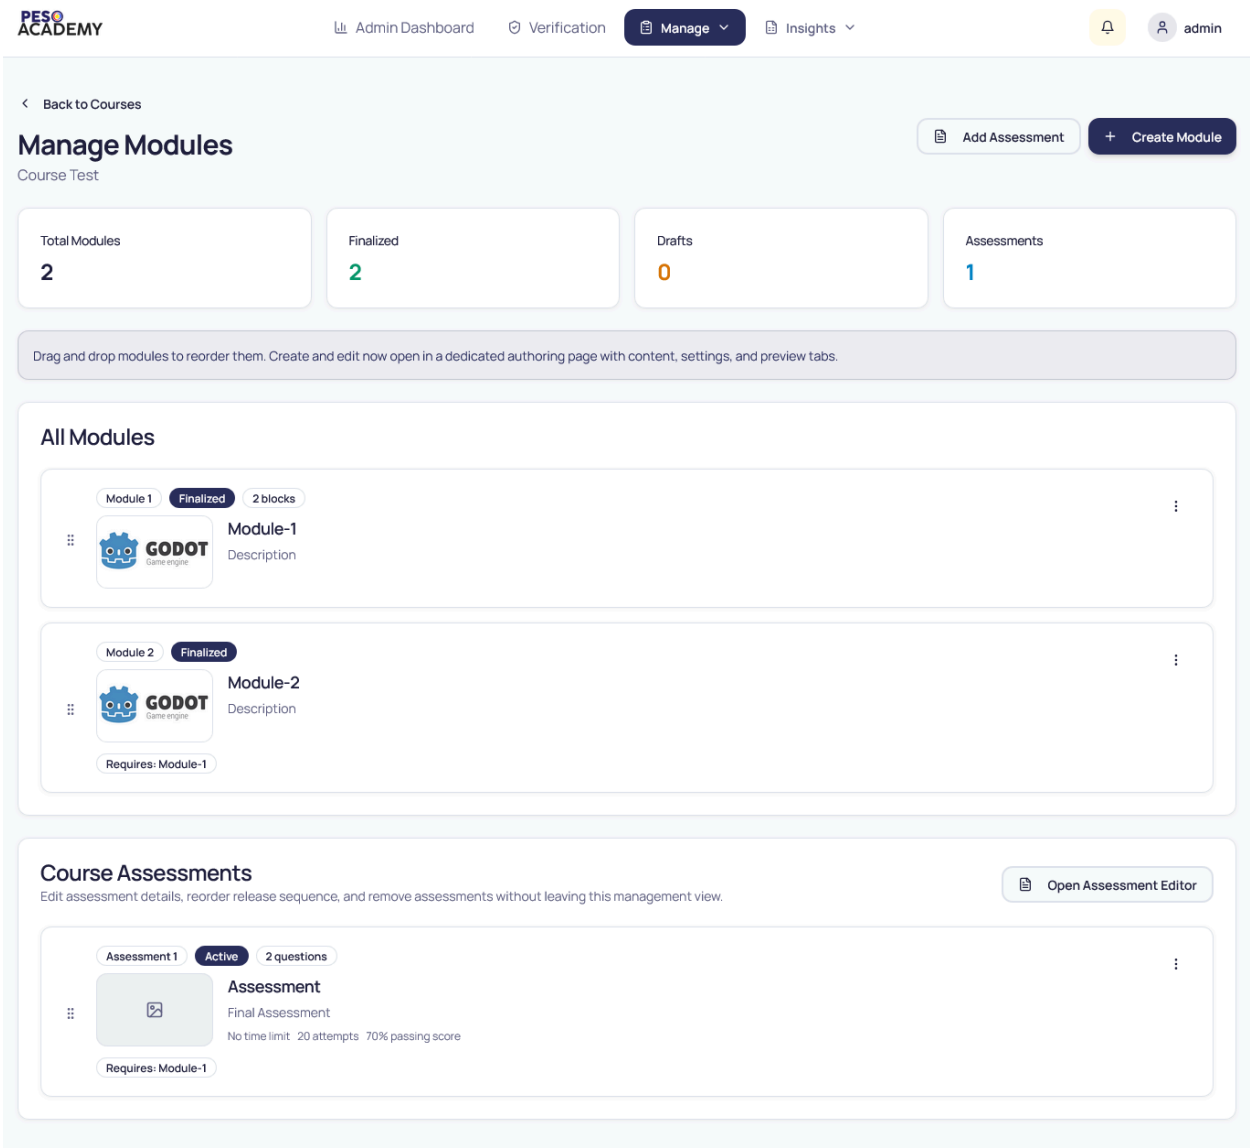

Figure 5: Admin & Trainer - Module Management

Figure 4.1: Admin & Trainer - Course Creation Modal functionality: The course creation modal supports the setup of a new course by collecting the essential information required to define its identity, visibility, and initial configuration before the content structure is expanded further.

Figure 5: Admin & Trainer - Module Management functionality: The module management interface organizes the modules inside a course and lets staff control sequencing, prerequisites, and maintenance actions so the learning path stays structured and easy to update.

Taxonomy Management

Manage course categories, skill tags, and topic tags that appear in course and module authoring.

Description

Final Assessment

Time Limit (minutes, optional)

Leave blank for no time limit

Passing Score (%)

70

Allowed Attempts

20

☒ Assessment is active

Inactive assessments stay hidden from learners until you enable them.

☐ Allow retry after passing

When disabled, learners stop getting new attempts as soon as they pass.

Add Question Block

Multiple Choice

Single-answer question with custom options and auto-grading.

True / False

Quick binary question with automatic scoring.

Essay

Long-form response for trainer review and feedback.

Figure 5.2: Admin & Trainer - Assessment Creation and Editing

Figure 5.2: Admin & Trainer - Assessment Creation and Editing functionality: The assessment editor lets staff create and manage graded evaluation content by defining questions, correct answers, scoring rules, and assessment settings so learner submissions can be reviewed and reported consistently.

Figure 6: Admin & Trainer - Taxonomy Management

Figure 6: Admin & Trainer - Taxonomy Management functionality: The taxonomy management page maintains the categories, topics, and skill labels used to classify content, improve filtering, and support reporting and recommendation logic across the learning system.

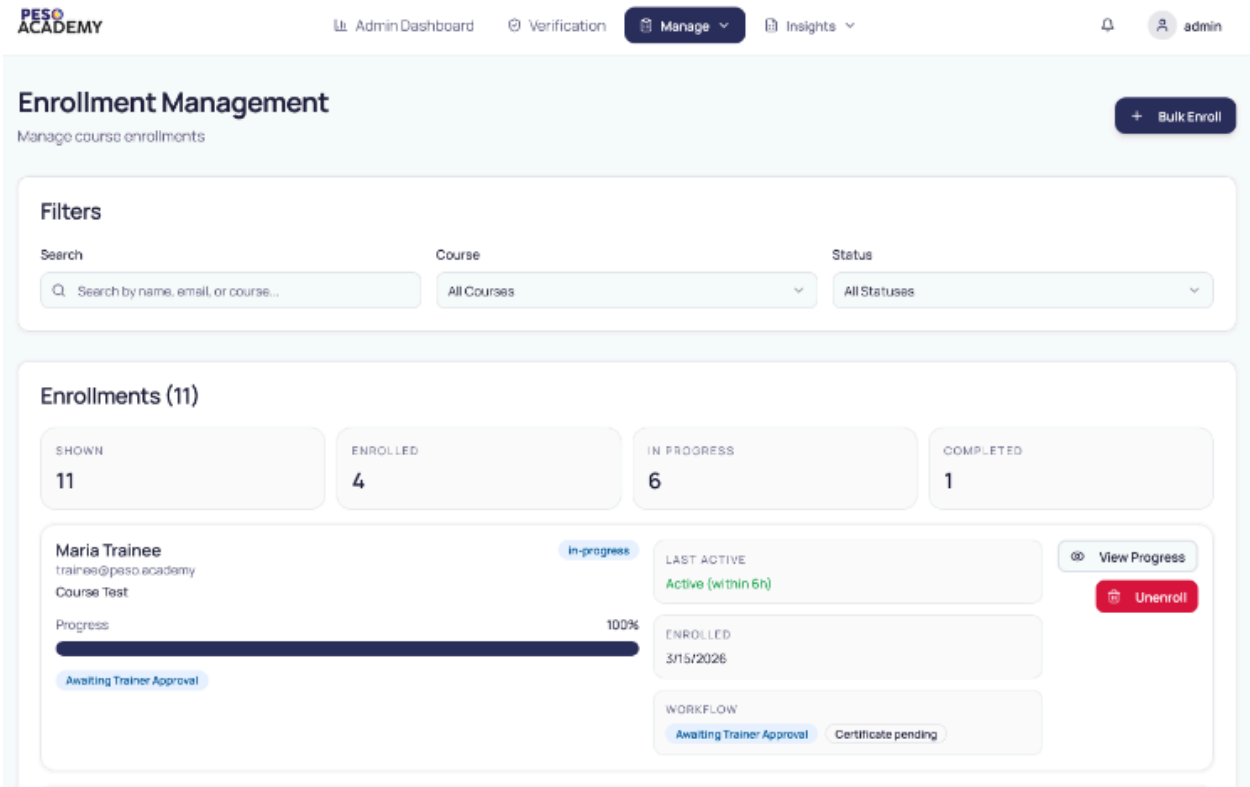

Figure 7: Admin - Enrollment Management

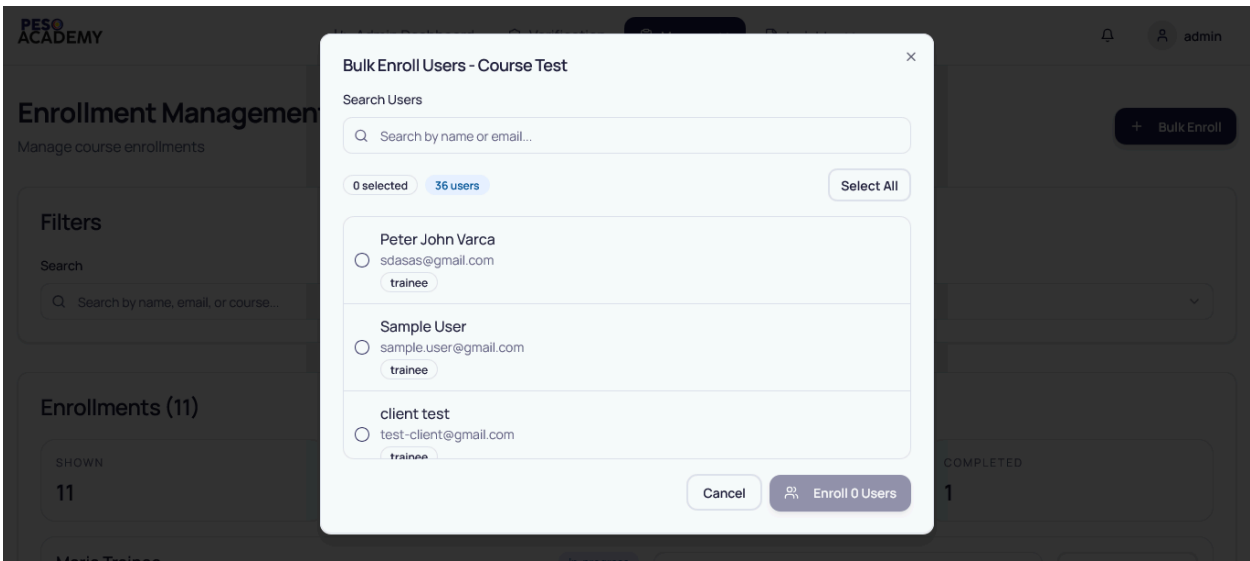

Figure 7.1: Admin - Bulk Enroll Modal

Figure 7: Admin - Enrollment Management functionality: The enrollment management page enables administrators to review and manage learner enrollment records, track status and progress, and take corrective actions when access or assignment changes are required.

Figure 7.1: Admin - Bulk Enroll Modal functionality: The bulk enrollment modal streamlines course assignment by allowing administrators to enroll multiple learners in one action, which reduces repetitive work when onboarding groups or updating large training cohorts.

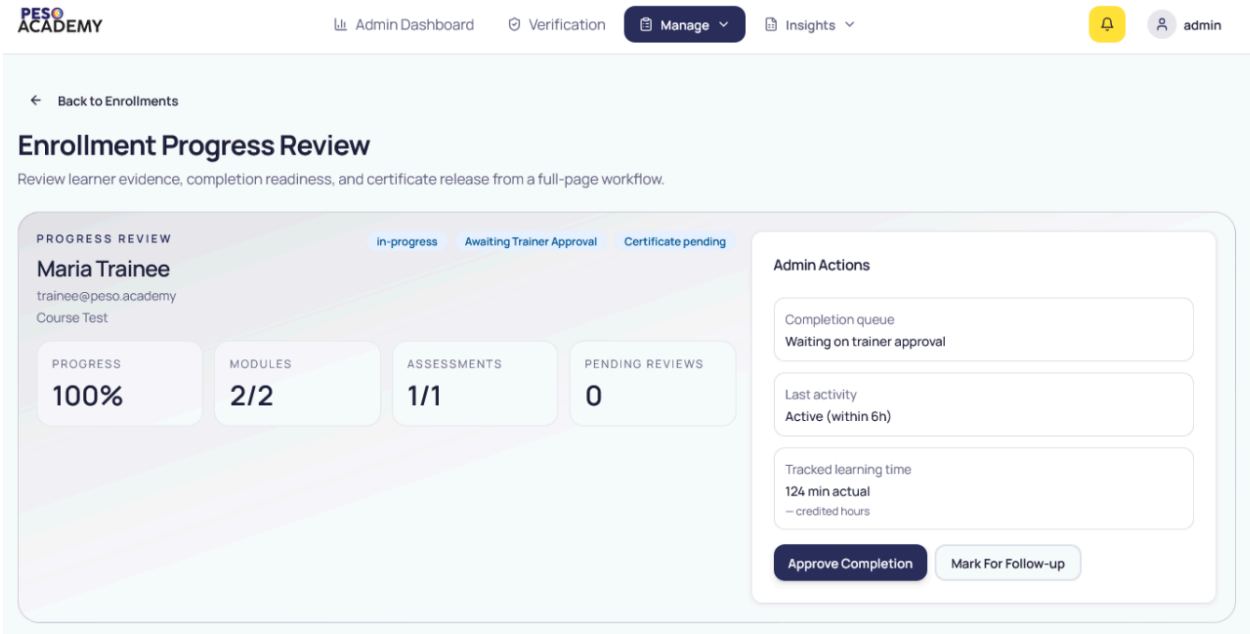

Figure 8: Admin & Trainer - Viewing Learner's Progress

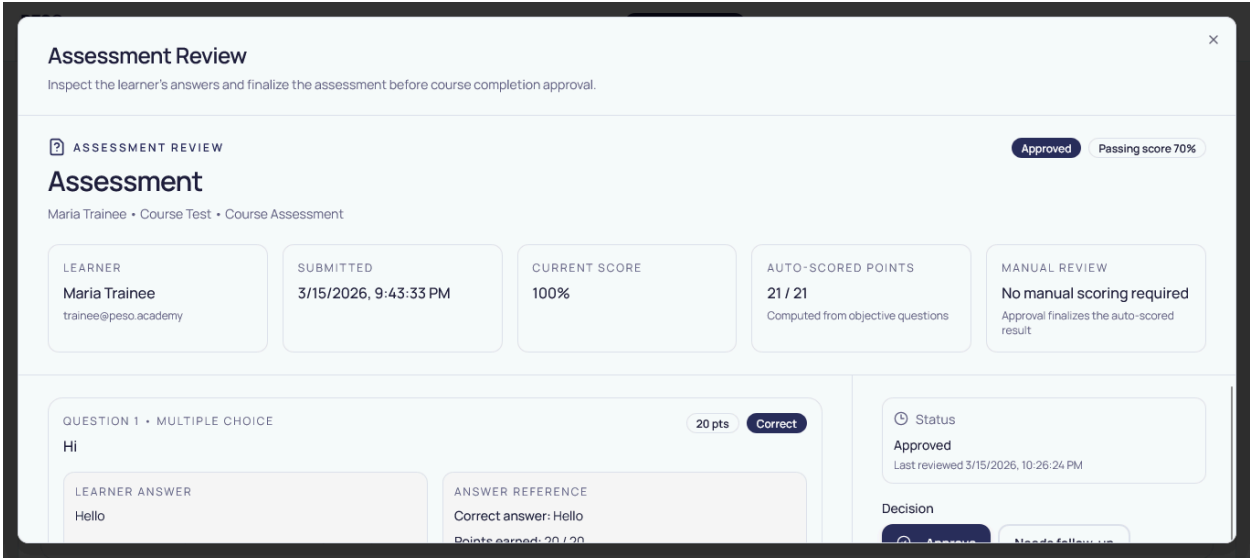

Figure 8.1: Admin & Trainer - Assessment Review Modal

Figure 8: Admin & Trainer - Viewing Learner's Progress functionality: This learner progress view gives administrators and trainers a detailed snapshot of module completion, assessment activity, and overall course readiness so they can monitor performance and make approval decisions with better context.

Figure 8.1: Admin & Trainer - Assessment Review Modal functionality: The assessment review modal supports manual evaluation workflows by letting staff inspect submitted answers, assign scores or outcomes, and record feedback for assessments that require human review.

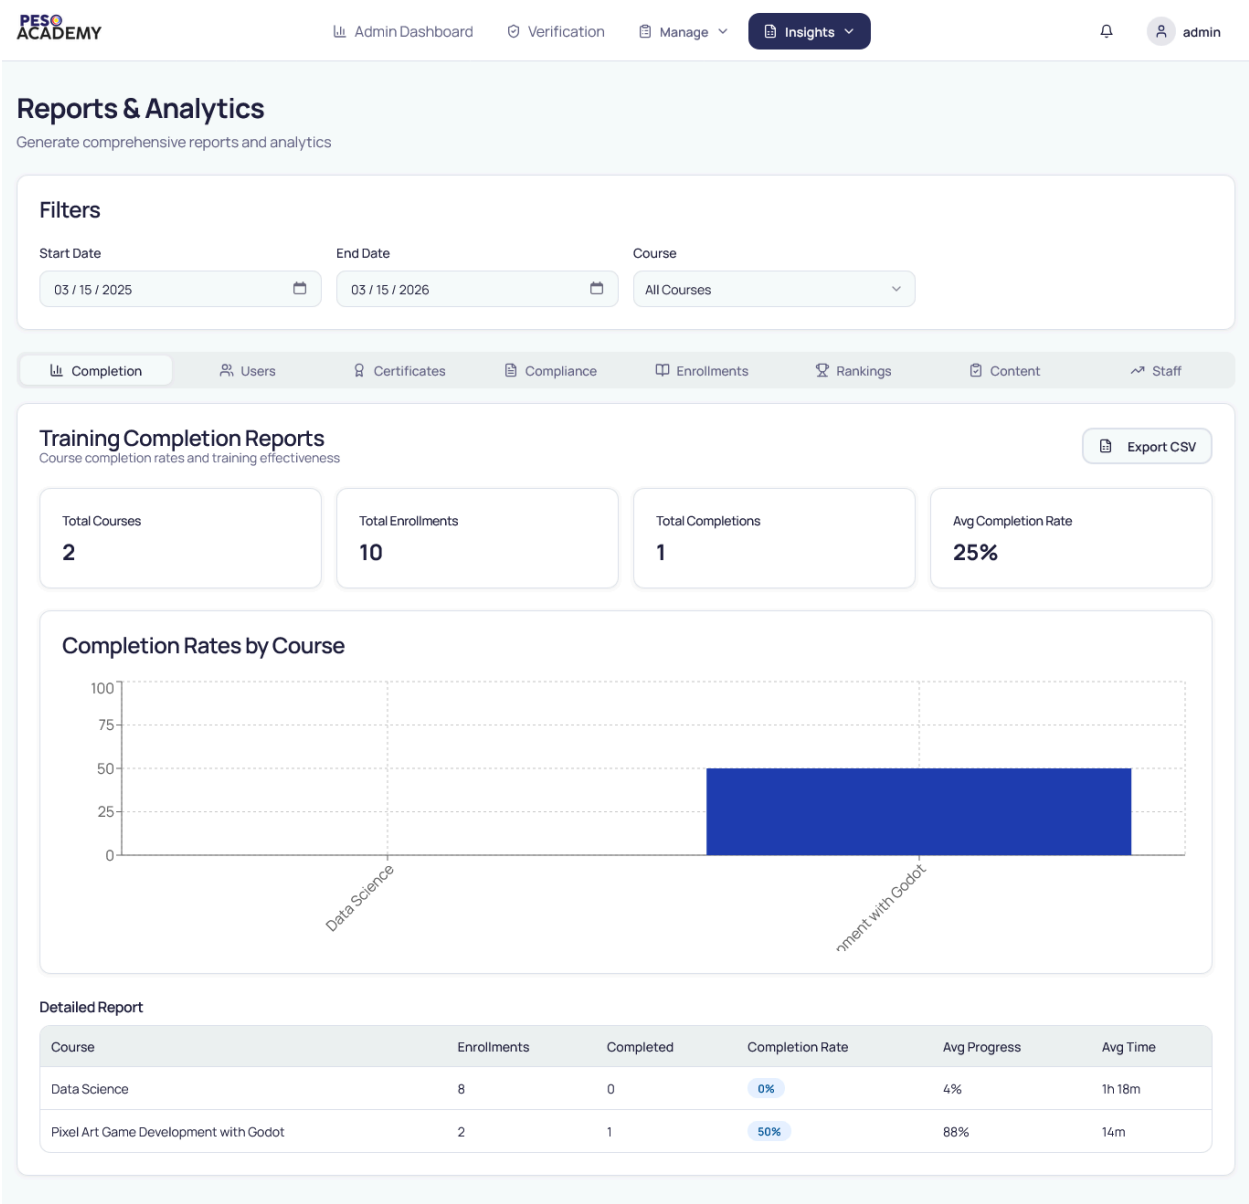

Figure 9: Admin - Reports

Figure 9: Admin - Reports functionality: The reports interface aggregates training data into a reporting view that helps administrators analyze enrollments, completion trends, and assessment performance for operational monitoring and decision-making.
